

A Directory of Software Web Sites

Dick Blaine
Bernard L. Peuto

Proposal

- The goal of this project is to collect and document links to important Software Web sites.
- It is expected that a set of pages on the SCC web site will document this pilot project.

Approach

- Starts with some of the links from the Fortran, Lisp, NLS and APL works
- Demonstrate the style and content by adding a set of resources pages to the SCC web site
- Provide a search capability thru keywords and or metadata
- Start a process of getting suggestions for new entries from the SCC distribution list
- Start a conversation with each major site to have cross linking and more collaborative initiatives together

A Long Term View

- Save the information from the web sites so it is never lost.
- Consider mirroring and hosting services
- Be the “Michelin guide” of Software Web sites
