

Coming Changes to the Website

Michael L Powell
mlpowell@pobox.com
August 16, 2006

Upgrades and Improvements to SCC web site

Make the site more open

- Encourage collaboration with others
- Host collecting activity

Upgrade server and components

- Add features for better communication
- Change some policies

Changes coming soon

New and improved features

- Discussion forums
- Blogs
- Wiki
- New user category

User categories

Public: no login

- View published documents

Poster: login with valid email address

- Post to bulletin board, comment on blog

Member: known to us

- Create/publish content subject to access control

Admin

- Create new users, set access control

“Poster”

Anyone can request a user id

- Server sends link to address to verify
- User sets password
- Allows posting to forums, blog comments
- Avoids spambots
- Can contact us to request member status

Discussion forums

Ploneboard

- Typical threaded-message bulletin board
 - Admins create forums
 - Others can create topics (“start conversation”)
 - ... or post messages (“post comment”)
 - All messages visible to public
- Restricted forums are possible if needed, using normal access control

SCC Meeting August 16, 2006

by Michael L Powell — posted at 2006-08-16 12:45 last modified 2006-08-16 12:45

There will be a meeting on Wednesday, August 16, 2006. Note that it will be later than usual 6:30-8:00PM instead of 5:30-7:30PM.

 Agenda for SCC meeting 2006-08-16

Size 17.9 kB - File type application/pdf

Public visibility

by Michael L Powell — posted at 2006-07-12 11:17 last modified 2006-07-12 11:17

For some reason, a published blog entry is not visible to an anonymous (not logged in) user. It appears to use the default Plone workflow, which should allow that. I'll investigate.

Re:Public visibility

Posted by  [mlpposter](#) at 2006-08-14 17:09

I changed to use the original Plone workflow, and that temporarily solved the problem. Coreblog needs a better workflow so it can allow anonymous viewing, but disallow anonymous commenting.

Editing Conventions ...

last edited 3
hours ago by
mlpowell

Wiki Editing Conventions

Zwiki uses a format called **reStructured Text**. It is simpler than HTML, and assumes most of the text is simply to be formatted into paragraphs. Simple, but not completely general, conventions are used for fonts, wiki links, and external links (URLs?). Simple formatting is used for paragraphs, titles, and sections. The goal is to make it easy to do most common things.

Fonts and links

Text uses the standard font. Enclosing a word or phrase between asterisks **like this** makes it *italics like this*. Enclosing a word or phrase between double asterisks **'like this'** makes it **bold like this**. *Italics can span lines, but the first asterisk must be followed by a non-space, and the last must be preceded by a non-space.*

The following:

```
*asterisks for italics*,
**double asterisks for bold**.
```

produces *asterisks for italics*, **double asterisks for bold**.

Enclosing a word or phrase in square brackets specifies a wiki link to another wiki page. When the page is being viewed (rather than edited), clicking on the link will take you to that page. You can create a wiki link to a page before the target page exists. If the page containing the link is viewed before the target page is created, a question mark '?' is displayed after the link. Clicking on the question mark will create the page and allow you to edit it.

characters above and below.

```
====  
Page title or subtitle  
====
```

becomes

Page title or subtitle

The page title is used once at the top of the page. The same formatting later in the page is a subtitle. The title is formatted as `<h1>`, the subtitles as `<h2>`

Section headings are indicated by lines of text followed by lines containing format characters. Four or more of the characters are needed. The headings form a hierarchy using the HTML tags `<h3>` to `<h5>`, with the style sheets defined by Plone and Zwiki.

The reStructured text processor checks that you are consistent in the levels, and doesn't allow you to skip levels. The following are the recommended levels.

Sections headings are created by a line of text followed by a line of four formatting characters. There are three levels of section headings, using equals `====`, minus `----`, and tilde `~~~~`.

```
Section Heading  
----
```

becomes

Section Heading

This is HTML `<h3>` format.

```
Subsection Heading  
====
```

becomes

Normal Plone Content Creation
